A photograph of a sea turtle swimming over a coral reef in clear blue water. The turtle is in the upper half of the frame, moving towards the left. Below it is a dense field of coral. The image is framed by a green border at the top and bottom.

***Where are we with the
Aichi Biodiversity Targets?***

**There are the
five Strategic
Goals**

Strategic Goal A

Address the underlying causes of biodiversity loss by mainstreaming biodiversity across government and society

Strategic Goal B

Reduce the direct pressures on biodiversity and promote sustainable use

Strategic Goal C

Improve the status of biodiversity by safeguarding ecosystems, species and genetic diversity

Strategic Goal D

Enhance the benefits to all from biodiversity and ecosystem services

Strategic Goal E

Enhance implementation through participatory planning, knowledge management and capacity building

Strategic Plan 2011-2020

Living in harmony with nature

Aichi Targets

- | | | | | | |
|---|---------------------------|---|------------------------|---|----------------------------|
|  | 1 Understand values |  | 8 Reduce pollution |  | 15 Enhance resilience |
|  | 2 Mainstream biodiversity |  | 9 Reduce invasive spp. |  | 16 Implement Nagoya Prot. |
|  | 3 Address incentives |  | 10 Minimize reef loss |  | 17 Revise NBSAPs |
|  | 4 Sustainable production |  | 11 Protected areas |  | 18 Respect and conserve TK |
|  | 5 Halve rate of loss |  | 12 Prevent extinctions |  | 19 Improve knowledge |
|  | 6 Sustainable fisheries |  | 13 Conserve gene pool |  | 20 Mobilize resources |

AICHI TARGETS INFOGRAPHICS

Strategic Goal D Enhance the benefits to all from biodiversity and ecosystem services

ECOSYSTEM RESTORATION AND RESILIENCE

By 2020, ecosystem resilience and the contribution of biodiversity to carbon stocks has been enhanced, through conservation and restoration, including restoration of at least 15 per cent of degraded ecosystems, thereby contributing to climate change mitigation and adaptation and to combating desertification.

What's this target about?

- By 2020, Ecosystem resilience has been enhanced through conservation and restoration
- At least 15% of degraded ecosystems are restored

What is ecosystem resilience?

Ecosystem resilience is the capacity of ecosystems to absorb and adapt to disturbances

Ecosystem restoration is the process of assisting the recovery of an ecosystem that has been degraded, damaged or destroyed.

progress

What's going on?

Estimates of land degradation

restoration

Restoration ecology has matured in the last couple of decades and it has attracted increasingly more attention, with an increase of 700% of journal articles in the ISI Web of Science with the keyword "restoration" between 1995 and 2010.

The set of active restoration tools has evolved to more complex approaches regarding planting methods and seed mixes.

Topical restoration should be a high priority. However, the highest investments for restoration projects are in North America and Europe.

Cases of natural regeneration are documented but recovery can take several decades or centuries.

It is difficult for restorative actions to follow the "mining biomes" in many developing countries.

National Initiatives

- Brazilian** Atlantic forest is currently the focus of one of the biggest restoration efforts in the world
- In **Belarus**, restoration projects have been developed with the support of organizations like GEF (Global Environment Facility)
- In **Western China**, the **Grain for Green** seeks to 15 million ha of low-yield farmland and 17 million more ha of barren lands
- In **Mexico**, CONANP and FANCI worked in the restoration of Northeast and Eastern Sierra Madre region

Needed actions

A three-component approach is proposed:

- First, parties need to identify highly degraded habitats and develop efforts to restore 15% of those
- Countries can also regard their programmes on active restoration of native habitats
- Increase the contribution of biodiversity to carbon sequestration and ecosystem services

How much is needed?

Uncertainties

- There is a lack of a credible of the global degraded and restored areas
- Defining degradation itself is one of the most important source of uncertainty
- Different actors will benefit from different services supplied by different ecosystems
- The feasibility of restoration must be assessed

Target

Strategic Goal D Enhance the benefits to all from biodiversity and ecosystem services

ECOSYSTEM RESTORATION AND RESILIENCE

By 2020, ecosystem resilience and the contribution of biodiversity to carbon stocks has been enhanced, through conservation and restoration, including restoration of at least 15 per cent of degraded ecosystems, thereby contributing to climate change mitigation and adaptation and to combating desertification.

What's this target about?

By 2020,

Objective 1

Ecosystem resilience has been enhanced through conservation and restoration

Objective 2

At least 15% of degraded ecosystems are restored

Needed actions

A three-component approach is proposed:

1

First, parties need to identify highly degraded habitats and develop efforts to restore 15% of those

2

Countries can also expand their programmes on active restoration of native habitats

3

Increase the contribution of biodiversity to carbon sequestration and ecosystem services

Global Youth Biodiversity Network

progress

Objective 1

Ecosystem resilience and biodiversity contribution to carbon stocks enhanced by conservation and restoration

Level of confidence
low

Objective 2

At least 15 per cent of degraded ecosystems are restored, contributing to climate change mitigation and adaptation

Level of confidence
low

Goal	Target	Target element	Poor	Moderate	Good	Unknown	
A. Address the underlying drivers	1	1.1 Awareness of biodiversity	→	→			
		1.2 Awareness of steps to conserve	→	→			
	2	2.1 Biodiversity integrated into planning	→	→			
		2.2 Biodiversity integrated into accounting	→	→			
		2.3 Biodiversity integrated into reporting	→	→			
	3	3.1 Harmful incentives	→	→			
		3.2 Positive incentives	→	→			
	4	4.1 Sustainable production and consumption	→	→			
		4.2 Use within safe ecological limits	→	→			
	B. Reduce direct pressures	5	5.1 Habitat loss at least halved	→	→		
			5.2 Degradation and fragmentation reduced	→	→		
		6	6.1 Fish stocks harvested sustainably	→	→		
6.2 Recovery plans for depleted species			→	→		?	
6.3 Fisheries have no adverse impact			→	→			
7		7.1 Agriculture is sustainable	→	→			
		7.2 Aquaculture is sustainable	→	→			
		7.3 Forestry is sustainable	→	→			
8		8.1 Pollution not detrimental	→	→			
		8.2 Excess nutrients not detrimental	→	→			
9	9.1 Invasive alien species prioritized	→	→	→			
	9.2 Invasive alien pathways prioritized	→	→	→	?		
	9.3 Invasive species controlled or eradicated	→	→				
	9.4 Invasive introduction pathways managed	→	→				
10	10.1 Pressures on coral reefs minimized	→	→				
	10.2 Pressures on vulnerable ecosystems minimized	→	→				
C. Improve biodiversity status	11	11.1 10 per cent of marine areas conserved	→	→	→		
		11.2 17 per cent of terrestrial areas conserved	→	→	→		
	11	11.3 Areas of importance conserved	→	→			
		11.4 Protected areas, ecologically representative	→	→			
		11.5 Protected areas, effectively and equitably managed	→	→			
		11.6 Protected areas, well-connected and integrated	→	→			
	12	12.1 Extinctions prevented	→	→			
		12.2 Conservation status of threatened species improved	→	→			
	13	13.1 Genetic diversity of cultivated plants maintained	→	→			
		13.2 Genetic diversity of farmed animals maintained	→	→			
		13.3 Genetic diversity of wild relatives maintained	→	→			
		13.4 Genetic diversity of valuable species maintained	→	→		?	
		13.5 Genetic erosion minimized	→	→			
	14	14.1 Ecosystems providing services restored and safeguarded	→	→			
		14.2 Taking account of women, IPLCs, and other groups				?	
15.1 Ecosystem resilience enhanced					?		
D. Enhance benefits to all	15	15.2 15 per cent of degraded ecosystems restored				?	
		16.1 Nagoya Protocol in force	→	→	→		
	16	16.2 Nagoya Protocol operational	→	→	→		
		17.1 NBSAPs developed and updated	→	→	→		
E. Enhance implementation	17	17.2 NBSAPs adopted as policy instruments	→	→			
		17.3 NBSAPs implemented	→	→			
		18.1 ILK and customary use respected	→	→			
	18	18.2 ILK and customary use integrated				?	
		18.3 IPLCs participate effectively				?	
	19	19.1 Biodiversity science improved and shared	→	→			
		19.2 Biodiversity science applied				?	
	20	20.1 Financial resources for Strategic Plan* increased	→	→			

Why are we failing to achieve the Aichi Targets?

Challenges with the Targets itself

- many targets not quantifiable, difficult to measure progress, unrealistic level of ambition
- insufficient reporting framework for countries
- not enough addressing of underlying drivers

Why are we failing to achieve the Aichi Targets?

Implementation Challenges

- CBD Resource Mobilization Strategy only adopted in 10/2012
- process of updating NBSAPs delayed implementation
- not enough political priority given
- not enough policy coherence
- too much top-down, too little bottom up
- no change in consumption and production patterns

An underwater photograph of a coral reef. The scene is illuminated by sunlight filtering through the water from the top, creating a bright, shimmering effect. In the foreground, there are large, branching coral structures. In the middle ground, a school of small fish is swimming. The background shows a dark, rocky reef structure. The image is framed by a light green border at the top and a dark green border at the bottom.

Post-2020 & Ecosystem Restoration

What is the Post-2020 Global Biodiversity Framework?

- Follow up to the Strategic Plan 2011-2020
- Global agreement that will define global action to address biodiversity loss for the next decades
- Set to be adopted at **COP15**→
- Ambition: A framework for all

Post-2020 – Preparatory Process

Post-2020 Global Biodiversity Framework

C Mission

Take urgent action across society to put biodiversity on a path to recovery for the benefit of planet and people

E. Implementation Support Mechanisms

D3. Tools & Solutions

- 12. Incentives & Subsidies
- 13. Mainstream in National Planning, Valuation, Laws
- 14. Mainstreaming in Economic Sectors
- 15. Resources & Capacity
- 16. Biosafety
- 17. Sustainable Consumption
- 18. Education, Knowledge
- 19. IPLCs, Youth, Women
- 20. Behaviour Changes

D1. Reducing Threats

- 1. Land/Sea Plan, Retain, Restore
- 2. Land/Sea Protect, Conserve
- 3. Invasive Species
- 4. Nutrient, Pesticide, Plastic
- 5. Sustainable Harvesting
- 6. Climate Change

D2. Meeting People Needs

- 7. Use for Food & Livelihood
- 8. Agriculture & Other Spaces
- 9. Water
- 10. Health, Cultures
- 11. Sharing Benefits

F. Enabling Conditions

G. Responsibility & Transparency

B Goals 2030

- (a) Area and integrity of freshwater, marine and terrestrial ecosystems
- (b) Species extinction and abundance
- (c) Genetic diversity
- (d) Nature provides
 - (i) People nutrition
 - (ii) Access to water
 - (iii) Resilience from natural disasters
 - (iv) Efforts to achieve target for Paris Agreement
- (e) Benefits shared fairly and equitably

A 2050 Vision Living in Harmony with Nature

Recommendations for Post-2020

- → Ensure that ecosystem restoration efforts are **not only** being focused on maximizing **carbon sequestration**
- → Ecosystem Services and Ecosystem Functions need to be addressed as equally important
- → Ecosystem restoration after natural disasters should be based on the best available science and focus on **passive restoration**
- → Need to agree on a UN system wide definition of ecosystem restoration

Let's work together!
